Red Rock Canyon Hazardous Fuels Reduction Project

The Bureau of Land Management, Southern Nevada District Office of Fire Management is providing an informational presentation on the planned implementation of the Red Rock Canyon Hazardous Fuels Reduction Project. The purpose of this project is to reduce the spread and intensity of wildland fires, protect public and private infrastructure, and protect and enhance native habitat in the Red Rock Canyon National Conservation Area.

The project objectives will be accomplished by treating non-native invasive annual grasses and their seed bank using two herbicides to create fuel breaks along roads, trails, natural features, and existing burn scars. Some areas will become temporarily inaccessible during herbicide treatments; project implementation, however, will be coordinated to minimize impacts to visitors. The project is scheduled to begin in October and will conclude at the end of February 2013. Treatments may resume in September 2013 and conclude at the end of February 2014.

2:00 Welcome/Introductions

2:10 Presentation: **Red Rock Canyon Hazardous Fuels Reduction Project**

2:40 Q & A

3:00 -----**Break**-----

6:00 -----**Reconvene**-----
